Science

Materials

- Everything is made from a natural or man-made material.

- Materials have different properties and are used to make different things based on what their purpose is.

- John McAdam was born in 1756 and is responsible for discovering tarmac.

- Recycling materials can help to protect the environment.

Material	Something an object is made from such as wood, plastic, brick, glass or metal.
Property	A way to describe what materials are like for example; hard, soft, light, heavy or waterproof.
Man-Made Material	A material that cannot come from plants, animals or the ground. It is a material that has to be made like plastic.
Natural Material	A material that comes from plants, animals or can be found in the ground like feathers or wool.
Recycling	The action or process of making waste into reusable material.
